

## Recursion :

- How to write recursive code
- Working
- TC/SC

Why?

- Merge sort
- Binary Trees
- Dynamic Programming
- Backtracking

Recursion: { function calling itself }

Solve a problem using smaller version of the same problem.

↳ subproblem

$$\begin{aligned} \text{Sum}(N) &= 1 + 2 + 3 + 4 + \dots + N \\ &= 1 + 2 + 3 + 4 + \dots + N-1 + N \\ &= \text{sum}(N-1) + N \end{aligned}$$

## Recursion Code

Magic steps

- 1) Assumption: Decide what your function does, and assume it does exactly that
- 2) Main Logic: Solving Assumption with subproblem
- 3) Base Condition: When should code stop.

Tracing

sub(mul(add(10, 20), 30), 75)

```
int sub(n, y) {  
    n - y  
}  
  
int add(x, y) {  
    x + y  
}  
  
int mul(n, y) {  
    n * y  
}
```

```
int fact(N) {
```

Calculate **factorial** of  $N$

$1 \times 2 \times 3 \times 4 \times \dots \times N$

Assumption:

return the factorial of  $N$

$1 \times 2 \times 3 \times 4 \dots \times N-1 \times N$

Base case:

if ( $n == 1$ )

return 1

Main Logic:

ans = fact( $N-1$ )  $\times$   $N$

return ans

}

$f(N) = 1 \times 2 \times 3 \times \dots \times N-1 \times N$   
 $f(n-1)$

$\uparrow$   
0  
 $\uparrow$   
 $f(1)$   
 $\uparrow$   
 $f(2)$   
 $\uparrow$   
 $f(3)$

Fibonacci series  $\text{fib}(n) = \text{fib}(n-1) + \text{fib}(n-2)$

	1	2	3	4	5	6	7	8	9	10	11	12
fib:	1	1	2	3	5	8	13					

int fib(N) {

$N^{\text{th}}$  fibonacci number

Assumption: return  $n^{\text{th}}$  fibonacci num

Base Case: if ( $n == 1$  ||  $n == 2$ )  
return 1

Main logic ans = fib( $n-1$ ) + fib( $n-2$ )  
return ans

4

0 1 2 3 4

$N$   
 $\downarrow$   
 $N-1$   
 $\downarrow$   
 $N-2$

SC:  $O(n)$

Example :

```
int add(x, y) {  
    return x+y  
}
```

```
int mul(x, y) {  
    return x*y  
}
```

```
int sub(x, y) {  
    return x-y  
}
```

main() {

int x=10, y=20, z=30

int a = add(x, y)     a=

int m = mul(a, z)     m=

int s = sub(m, 75)     s=

print(s)

}

main() {

int x=10, y=20, z=30

print(sub(mul(add(x, y), z), 75))

}

sub(mul(add(x, y), z), 75)

mul(add(x, y), z)

30

add(x, y)

10    20

# Internal working (Call Stack)

$\text{add}(x, y)$

$\text{mul}(\text{add}(x, y), z)$

$\text{sub}(\text{mul}(\text{add}(x, y), z), 75)) =$

# Works like an Idli cooker  
Stack

```

int sum(N) {
    if (N==1) return 1
    return N + sum(N-1)
}

```

```

main() {
    print(sum(5))
}

```

sum(5)  
5 + sum(4)

sum(4)  
4 + sum(3)

sum(3)  
3 + sum(2)

sum(2)  
2 + sum(1)
